Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawakami (5,458,018). Kawakami discloses a housing for a bicycle shifter comprising a housing element (2a), an installation opening (see fig. 3), and a second housing member including an integral closure member (21) for covering the installation opening, the closure member integral with the second housing element, said second housing element operatively connected to the first housing element and configured to be operable between open and closed positions, the installation opening being uncovered in the open position, wherein the closure member has a substantially planar configuration in the manner of one of a flat surface and a three-dimensional surface. The closure member (21) has a substantially constant thickness over substantially the entire surface of the closure member and is made of a material having hard rubber mechanical properties. The closure member also has a catch element that is brought into latching engagement with a housing recess (see col. 2, lines 60-65), wherein the closure member exerts a slight surface pressure on the housing in the region of the installation opening. The closure member further comprises a recess and a projection for opening the closure member. The housing comprises a second housing element (23) joinable to the closure device by a detachable insertion device.

Art Unit: 3682

Although Kawakami does not disclose the closure member to be a one-piece integral member with the second housing element, it would have been obvious to one of ordinary skill in the art at the time the invention was made to make the closure member part of the second housing member, since it has been held that constructing formerly separable parts into a one-piece integral structure involves only routine skill in the art. *Howard v. Detroit Stove Works*, 150 US 164 (1893).
